

SAP Mergers & Acquisitions Services

Turn complex deals into stable, high-confidence SAP operations.

For CFOs, CIOs, and Heads of M&A who own the numbers behind the deal.

Korcomptenz

Total Technology Transformation

We help deal teams keep their promises to the board—by turning SAP from the biggest integration risk into the fastest path to Day-0 readiness, financial transparency, and on-time TSA exit, so the synergies you commit on paper actually show up in the numbers.

The Hidden IT Gravity Behind Every Deal

Where M&A value is quietly won—or lost

On paper, mergers, acquisitions, and carve-outs are about strategy and synergies. In reality, much of the value is decided in one place: **your SAP and surrounding application landscape.**

When two (or more) environments must behave like one business, complexity spikes: fragmented systems, limited visibility into the acquired environment, tricky carve-outs and migrations, TSA pressure, regulatory and security exposure, delayed reporting, and teams juggling change while still closing the books.

SAP is where deals either unlock synergies or leak value for years.

Korcomptenz turns that dynamic around—using SAP as a driver of value instead of a source of risk, and **making regulatory and business reporting “board-ready” from Day 0, not months after go-live.**

Where Korcomptenz Creates Deal Value

Your SAP partner for fast, clean, low-risk integration and separation

We bring deep SAP expertise and a proven M&A toolkit so technology stays aligned with the deal thesis.

End-to-end SAP M&A specialization

From pre-deal assessment through carve-out, merger, and S/4HANA moves, SAP is run as one integrated workstream, not disconnected projects.

Risk-aware, compliance-aligned execution

Playbooks and controls sharply reduce data separation errors and post-go-live issues in complex scenarios.

Day 0, Day 1 and beyond

We design for a new entity that can reliably run O2C, P2P, manufacturing, and close from day one.

Proven in complex programs

Our teams have supported global carve-outs and integrations across manufacturing, automotive, and life sciences, helping clients reduce post-go-live data issues and accelerate TSA exits compared to prior approaches.

Accelerators, templates & SDIT engine

Our SLO-based SDIT tool supports clean separations and mergers at scale, often delivering major cost and timeline savings versus ad-hoc approaches.

Business-first lens

We start with your P&L, TSA milestones, and operating model, then align company codes, charts of accounts, processes, and reporting so the financial story of the deal is clear and defensible.

Reporting-ready from Day 0

Interim and target reporting for boards, auditors, and regulators is built in, even before full SAP consolidation is complete.

Our SAP M&A Playbook

A structured path from deal intent to steady state

Korcomptenz follows a clear playbook that turns your deal thesis into executable SAP outcomes—from first assessment to post-go-live stabilization.

Phase 1: Deal Shaping & Pre-Merger Assessment

See the SAP picture before you sign or separate: assess buyer/seller landscapes, processes, and risks; identify overlaps and compliance impacts; define a high-level integration or separation strategy and target architecture.

Phase 2: IT Separation, Integration & TSA Strategy

Design the route from Day 0 to TSA exit: define the target SAP operating model; design separation for divestitures (company codes, plants, controlling objects, master data); and build a TSA-driven roadmap with security and infrastructure plans.

Phase 3: SAP Data & System Transformation

Execute the heavy lifting: perform company code merges and system consolidation; carve out, mask, and securely transfer data; execute S/4HANA moves and configuration transfer; and build or migrate infrastructure tuned for performance and resilience.

Phase 4: Cutover Orchestration & Day 1 Readiness

Turn cutover from a cliff edge into a controlled step: create and rehearse a detailed runbook, validate volume and performance with dry runs, and confirm readiness for finance, supply chain, sales, manufacturing, and reporting.

Phase 5: Hypercare, Optimization & Value Realization

Stabilize fast, then capture synergies: provide post-go-live hypercare, tune performance, rationalize processes and charts of accounts, support adoption, and optimize cost, resilience, security, and managed services.

Across all phases, we use proven templates and SAP best practices to keep decisions transparent for IT and business leaders.

Outcomes You Can Take to the Boardroom

M&A results you can measure—not just survive

With Korcomptenz as your SAP M&A partner, you're not just buying integration services—you're protecting deal value, timelines, and reputation. You're buying outcomes you can quantify:

Faster, safer go-lives

Complex programs go live faster and with far fewer post-go-live data issues.

Day 0 operational readiness

New entities run order management, invoicing, and close activities in SAP from day one.

Lower risk in data separation and migration

Fewer errors, stronger compliance, and audit-ready documentation—even under TSA pressure.

Faster financial transparency

Rationalized structures and tested closing scenarios accelerate month-end and reconciliation, so you see deal performance sooner.

Stronger consolidation and reporting

Harmonized master data and aligned entities enable faster group consolidation and clearer views of deal economics..

On-time TSA exits

Aligned plans and guardrails help you exit TSAs cleanly, avoiding penalties and legacy drag.

A future-ready SAP core

You build a platform ready for S/4HANA, cloud, analytics, and AI-enabled processes that support growth beyond the deal.

Talk to an SAP M&A Specialist

If you're planning, negotiating, or executing a merger, carve-out, or TSA exit, we can walk through how this playbook would apply to your specific deal—and where the biggest SAP risks and value levers usually hide.

Request a 30-minute confidential review of your SAP M&A plan and TSA assumptions.

We'll help you see where SAP might quietly erode deal value—and how to turn it into one of your safest, fastest levers for delivering the numbers you've committed to the board.
